Lab 5 – UDP Client/Server w/ Web Interface   Name_____

Fall 2014   Due Date: 12/1/2014

Instructor: Troy Scevers

Possible Points: 10

Instructions

In this lab we will be modifying the application from lab4. We will add a web interface to control the system. We should be able to set UDP port for both client and server and Destination address for the client. We will also modify the buttons. If button three is pressed we will send a custom message that was programmed through the web interface. If button 2 is pressed we will prompt the user for a string to send. Button 1 will continue to perform as it did in lab 4.
